

**HOW TO USE THIS BULLET LIST
TO SELECT A BULLET MOST SUITABLE FOR YOUR PURPOSE**

The bullet design you choose does not influence date of shipment, as each order is cut to individual specifications.

Bullets in shaded boxes are our standard bullet designs. We particularly recommend them for use for their respective purpose. The other bullets listed are more specialized.

Dark grooves in drawings are crimp grooves. Drawings are not drawn to exact scale, but are approximately actual size.

Bullet weights are only approximate, due to variance in alloy weights. Alloy weights (other than those designated linotype) are the approximate weights in the alloys in popular use at the time of their introduction.

Top figure in each box is our bullet number.

Lined base denotes gas check bullet.

NEW BULLET DESIGNS, AND DESIGNS NOT PREVIOUSLY LISTED.

Weights listed are only approximate, due to alloy variation, etc. Alloys other than linotype will weigh more.

7m/m

#289 55 grains linotype

32 ACP, especially Walther GSP-C

NOTE: #66 and #66BB (either usually sized .313" have proven successful in the GSP-C. We recommend them. The new bullets listed below may also be of interest, however, as they are variations of .38 caliber bullets that have proven successful in the S & W model 52.

#280 100 grains linotype, full wadcut-ter.

#278 100 grains linotype, similar to the .38 caliber #251, with bevel, both ends.

9 m/m

#279BB 92 grains linotype. Linford design.

#264 119 grains linotype, semi wadcut-ter. Design by Charles Derbyshire.

#275 120 grains linotype, designed by "Sleepy" Lehman.

#277 125 grains linotype, designed by John Adams.

#286 130 grains linotype, designed by Johann Roller.

38 cal

#266 75 grains linotype, designed for indoor short range (7 yards).

#274 88 grains linotype.

#272 135 grains linotype, pointed 357 magnum.

#290 #51 design with shortened nose to fit short cylinder 357 magnum revolvers.

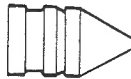

#268BB 158 grains linotype.

#257 215 grains, lighter in linotype. Design by Eldon Carl.

41 mag

#291 Pointed nose.

44 cal

#503S 280 grains linotype, #503 with extended base band.

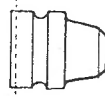

#271 200 gr. Linotype

#273 pointed nose.

45 ACP

#S242 160 grains linotype.

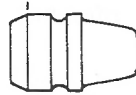

#242 185 grains linotype.

#249 195 grains linotype, suggested by Lloyd Durst.

#265 200 grains linotype, and heavier, by extending bevel base. De- signed by John Adams. Referred to as "Adams bullet".

#68S #68 with extended base band to increase weight to 218 grains linotype.

#68BBS Same as #68S, with bevel base to increase weight to 226 grains linotype.

MAXI-BALL

#287 - .36 Caliber available in 4, 6 or 10 cavity molds.

#282 - .45 Caliber available in 4, 6 or 8 cavity molds.

#281 - .50 Caliber and #283 - .54 Caliber avail- able only in 4 cavities cut in a 6 cavity block, due to the large bullet diameter.

NOTE: Letters to the right of Box refer to types of base available.
P.B. = Plain Base ● B.B. = Bevel Base ● G.C. = Gas Check
